> What will we discuss today?
```

OVERVIEW

Create a deck with any protocols you own and go 1-on-1 against the BOT (Basic Oppositional Terminal). The BOT is a powerful opponent but can be tricked, commanded, and exploited. Take turns acting as yourself and then on behalf of the BOT. Compile all 3 of your protocols to win, just as in a standard game. Careful though, if the BOT compiles the same protocol twice, it automatically wins! Play through all the scenarios and even create your own custom scenarios!

IMPORTANT: Make sure you have familiarized yourself with the standard 2-player rules before playing this single-player mode. All of the standard rules apply when playing against the BOT. The BOT's specific rules are outlined in this rulesheet.

SETUP

Your first game? Start with:
You) Fulcrum, Overwhelm, Momentum
BOT) Regular Mode Level 1 scenario.

Instead of doing a standard draft, follow the steps below:

1. Choose a scenario to play (see *Scenarios*). The scenario will determine which protocols the BOT will use > It's recommended to play the scenarios in order.
2. Place the BOT's 3 protocols from left to right (from your viewing perspective) in the order listed in the scenario.
3. Choose any 3 of the remaining protocols and place them in front of you (below the BOT's protocols) in the order of your choice.
4. You and the BOT each take the 6 Command cards belonging to your 3 protocols and shuffle them together, forming an 18-card deck.
5. You each draw a starting hand of 5 cards. Place the BOT's cards in a face-down staggered line, near its deck — this will be the BOT's "queue".

Note: The play area is set up as in a standard game game, except for how the BOT's cards are oriented and its queue.

The Play Area (differences with standard setup)

GAMEPLAY

Your Turn

You always play first. Perform the same phases as in a standard game (you may consult the back of the Control Component card for a quick reminder).

The BOT's Turn

The BOT also performs the same phases as in a standard game.

The BOT's Actions

When performing its Action phase:

- If the BOT has 1 or more cards in its queue > It plays 1 or more cards.
- If the BOT has no cards in its queue > It refreshes the queue.

Play: The BOT may play 1 or more cards on its turn, depending on the chosen scenario. If the BOT must play several cards, it plays them one at a time, following the sequence listed in the scenario (always orient its cards facing you).

IMPORTANT: When the BOT plays a card, it ALWAYS plays the card at the front of its queue (the card closest to you).

The scenario will dictate whether the BOT plays its cards face up or face down.

- **Face up:** Flip the BOT's card face up. The BOT must play it in the line with the matching protocol.
- **Face down:** Consult the scenario to determine where the BOT plays its card.

Refresh: The BOT refreshes like in a standard game. Make sure you add the cards to its queue in the order they are drawn. The last card it draws goes at the back of the queue (furthest from you).

Playing with Control (BOT) ⚠

If the BOT has the Control Component and it MUST compile OR refresh, the BOT will:

1. Place the Control Component back in its neutral position — the BOT loses control (like in a standard game).
2. Perform the Control parameter indicated in the scenario (The BOT does NOT rearrange a player's protocols like in a standard game).
3. Perform its compile or refresh (like in a standard game).

Special Rules and Cases for the BOT

What happens if an effect requires the BOT to make a decision?

-> You must decide for the BOT how to resolve that effect. Choose the option most favorable to you, even if it disadvantages the BOT.

What happens if the BOT runs out of cards in the queue to play the required number for the scenario?

-> It plays all the cards in the queue.

What happens if the BOT has to discard 1 or more cards?

-> The BOT discards the required number of cards from the queue, starting with the front-most one and proceeding backwards.
-> If the BOT does not have enough cards in its the queue to discard, it discards all the cards in the queue.

What happens if the BOT must play a face-up card, an effect prevents it from doing so?

-> The BOT must play that card face down in a line of your choice. As above, choose the option most favorable to you.

What happens if the BOT has to add a card to its queue other than during its refresh action?

-> When the BOT draws a card, or when a card is returned or added to its queue, always place it at the back of its queue.
-> If the case involves several cards at once (example: multiple cards being returned to its queue), shuffle those cards and add them one at a time to the queue.

Victory

You win if you flip all 3 of your protocols to their "compiled" side before the BOT does either of the following:

- It flips all 3 of its protocols to their "compiled" side.
- It compiles one of its already compiled protocols.

Note: If you are having difficulty beating the BOT, try checking the *Tips to adjust difficulty* under *Scenarios*.

SCENARIOS

There are 6 different scenarios available in each mode. In the regular mode, only the values and protocols matter on the BOT's cards (as if they have no commands). In the advanced mode, resolve the commands on the BOT's cards as in a standard game.

- A Lvl:** The level number for the scenario.
- B Name:** The name of the scenario.
- C Protocols:** The protocols (and therefore the cards) the BOT uses.
- D Cards Played:** The number of cards the BOT plays on its turn.
Face up = Face up in the line with the matching protocol.
Face down in lowest/highest = Face down in the line with the BOT's lowest total value / highest total value.
 -> If there is a tie, choose in which of the tied lines the BOT plays that card.
- E Control:** The parameter shown below resolves when the BOT loses control (see *Playing with Control (BOT)* ).
No effect = Nothing happens.
Draw = The BOT draws the top card of its deck and adds it to the queue.
Steal = The BOT draws the top card of your deck and adds it to the queue.
Rearrange = You rearrange your OR the BOT's protocols.

Custom Scenarios

To build your own custom scenario, first decide whether you want to play in Regular or Advanced Mode. Then choose:

- Any 3 protocols for the BOT's deck (Ambush, Fulcrum, Momentum, or Overwhelm are recommended).
- How many cards the BOT plays on its turn, and how.
- What Control parameter the BOT will use.

Tips to Adjust Difficulty

- **If you win a scenario too easily:** Skip the next scenario.
- **If a scenario is too difficult:** During setup, replace 1, 2, or even all 3 of the BOT's protocols with protocols of your choice.
- **If a scenario is still too difficult:** When the Control Component would return to its neutral position, you keep it (if you already had it) or gain it (if the BOT had it) instead.
- **Still too difficult:** Choose 5 cards from your deck and then shuffle the deck, instead of drawing 5 random cards.

Regular Mode Scenarios - Play as if the BOT'S cards do not have any commands

A	B	C	D	E
LVL	NAME	PROTOCOLS	CARDS PLAYED	CONTROL
1	Define Parameters	Envy, Gluttony, Greed	1: Face up	No effect
2	Data Transfer	Momentum, Overwhelm, Pride	1: Face up	Draw
3	Merge Sort	Ambush, Fulcrum, Overwhelm	1: Face down in lowest 2: Face up	Steal
4	Authentication	Ambush, Fulcrum, Overwhelm	1: Face up 2: Face up	Draw
5	Distributed Denial of Service	Ambush, Fulcrum, Overwhelm	1: Face down in highest 2: Face down in lowest 3: Face down in lowest	Draw
6	2-Factor Authentication	Momentum, Overwhelm, Pride	1: Face up 2: Face up	Draw

Advanced Mode Scenarios - The BOT'S cards have commands (like a regular player does)

A	B	C	D	E
LVL	NAME	PROTOCOLS	CARDS PLAYED	CONTROL
1	Handshake	Fulcrum, Momentum, Overwhelm	1: Face up	No effect
2	Encryption	Fulcrum, Momentum, Overwhelm	1: Face down in lowest 2: Face up	Draw
3	Vulnerability Exploit	Gluttony, Lust, Pride	1: Face up 2: Face up	Steal
4	Benchmark	Ambush, Fulcrum, Momentum	1: Face up 2: Face up	Draw
5	Bottleneck	Ambush, Momentum, Overwhelm	1: Face down in lowest 2: Face up 3: Face up	Rearrange
6	Root Access	Ambush, Momentum, Overwhelm	1: Face up 2: Face up 3: Face up	Draw
